DEBORAH GUY: My name is Deborah Guy,

2 D-e-b-o-r-a-h G-u-y, and I did not come prepared for this  
3 meeting because I heard it over the "X" today quite late,  
4 so the only thing I can speak of is my own feelings and  
5 off the cuff so to speak.

6 Nevada has already done its duty as far as  
7 the United States is concerned starting with the civil  
8 war when we gave them our silver and again with our  
9 nuclear testing, and the air bases that are in our state.  
10 We have contamination in Fallon, we have radiation out  
11 there, and we have above-the-ground testing out there,  
12 and the government said, oh, well, that went in the other  
13 direction.

14 I don't think our government has been honest  
15 with us about this. There was supposed to be three test  
16 sites. There was only one, and we're it, and we haven't  
17 had any advertisement, there's no signs. I went all the  
18 way through the parking lot three different places trying  
19 to find this little room, and this is not the way to  
20 treat the voters of Nevada.

21 I think with this administration that's in  
22 now, we have little hope of having any other site looked  
23 at, and this site at Yucca Mountain is earthquake prone,

24 and nothing has been addressed about that at all. They

552270

25 just said, well, we'll let science take care of that, and

67

1 they don't address it at all, and it would be bad for the

2 whole nation if we had a size eight earthquake down there

3 and everything runs out and the whole nation is

4 contaminated, and then we'll all have to move out.

5 Thank you.
